

ChemBio Enviro Curtain™

Passive Carbon Dioxide Scrubbing Quick, Simple, No Mess

Low cost, effective and environmentally friendly, the ChemBio Enviro Curtain is your solution to removing CO₂ during a mine emergency. The Enviro Curtain gives you these advantages by using soda lime (not lithium hydroxide) as the active agent for removing CO₂:

Here are the facts:

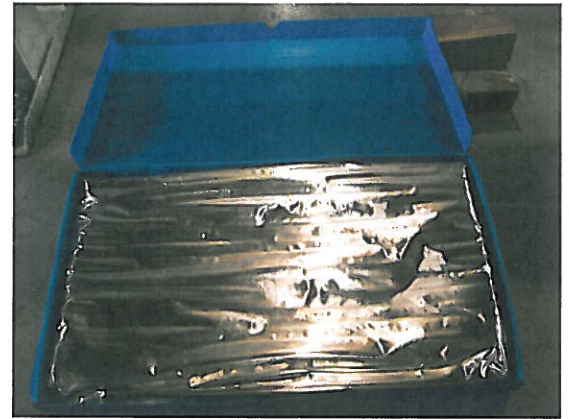

- Cost 33% of the price of lithium hydroxide curtains.
- **Do Not** create a hazardous waste by-product.
- Are sealed (ready-to-use) in a waterproof, airtight storage pouch with a 5-year shelf life.
- Are extremely easy to use. Just set the curtain hanger on the floor and hang the curtains. The curtains are completely passive and do not require power to operate.

Specifications:

For sheltering or barricading, ChemBio Enviro Curtains are your best choice for scrubbing carbon dioxide. Assuming a carbon dioxide production rate of 0.50 liters per minute per person, each curtain contains enough active scrubbing agent to remove the carbon dioxide generated by one person in 24 hours.

ChemBio's Enviro Curtains are packaged in an airtight, vacuum sealed pouch and are shipped, ready to use, including the hanging hardware. To use them, just set the hanger on the floor and hang the curtains on it. The curtains are completely passive and do not need any power to operate. Quick, Simple, No Mess.

Each hanger holds 16 curtains. Enough carbon dioxide scrubbing for 16 man-days.

Curtains in airtight pouch.

Curtains on hanger.
